1. About Us

GD-ESS EYS is an energy management system (EMS) for battery energy storage systems (BESS) with three web apps: Container, Field, Boss.

2. Our Design System (Storybook)

93 color tokens, 46 icons (Tabler), all UI components, and 2D SCADA graphics are live in Storybook. Use it as your main reference:

<https://ilterisyucel.github.io/monorepo-bun-starter/>

3. What We Need From You

3.1 Design Tokens

- Review, fix, and approve our 93 color tokens; add and fix icons (46 today).
- Add a font/typography token set. We do not have one — sizes live inside components today.
- Add light theme colors. Our tokens are mostly dark theme.

3.2 Components

- Review all Storybook components; fix inconsistencies (spacing, alignment, borders, sizing).
- Approve the final look for production. Add missing states: loading, empty, error, disabled.

3.3 2D Graphics Redraw

Redraw our 2D SCADA graphics. They must inherit from standard electrical circuit element symbols, like in FPGA and EDA design programs.

Graphics: BSC, TMS, BESSDiagram, RackCell, CircuitBreaker, DCOuput, HvacUnit, PanelCard, FirePanel, EnergyAnalyzerGraphic.

Style rules:

- Flat 2D, front view, line-based schematic. No perspective, no isometric, no 3D.
- Dark background #0f0f1a, thin dark outline. Transparent background (PNG or SVG).
- Neutral colors only (gray/white). Status colors and all labels are applied by code, never in the artwork.

3.4 Figma Screen Designs

Please send us Figma screen designs for all pages. Boss app screens must be mobile-first (PWA). Current screens are in Storybook. "Reports" and field "Control" are placeholders — design from scratch.

4. Deliverables

(1) Token sheet: colors, typography, light theme. (2) Approved component library. (3) 2D graphic set (PNG or SVG), circuit-symbol based. (4) Figma designs for all pages.
